Lamps Slideshow

Before start

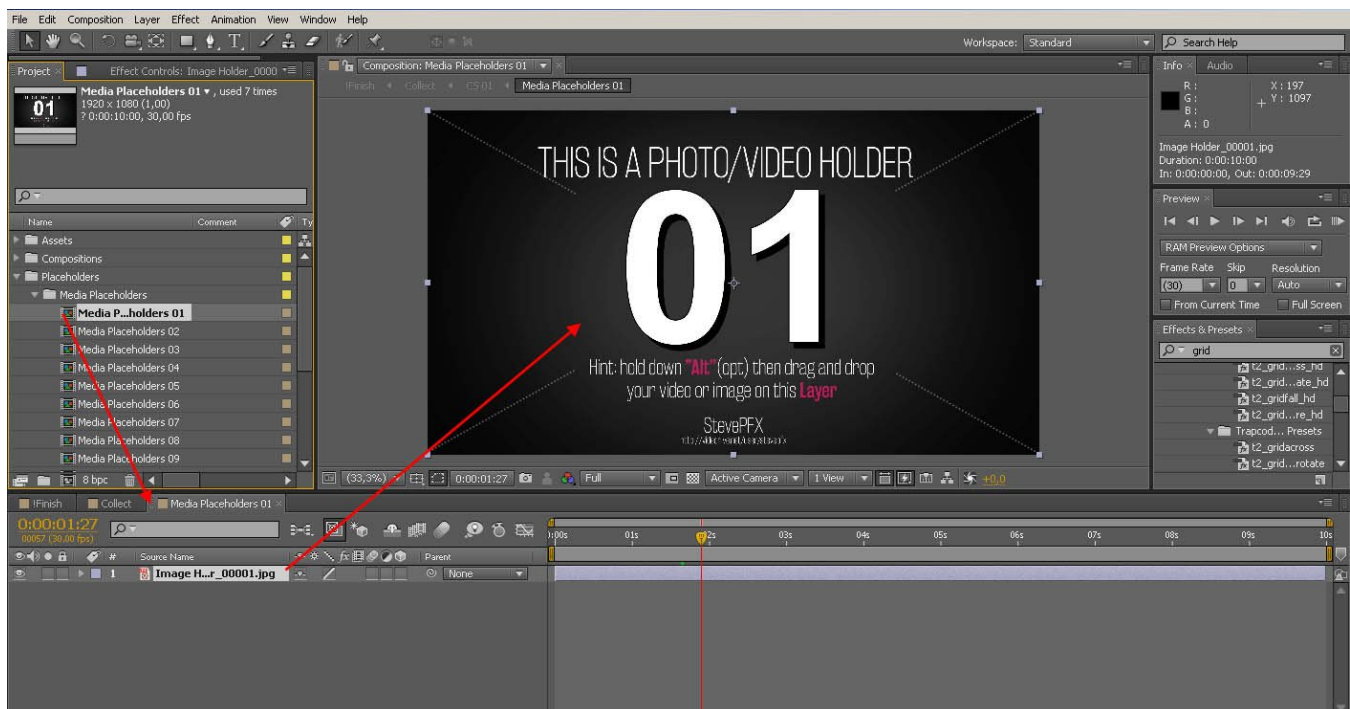

In this project some layers hidden. If you will need to unhide this layers Press "Shy" switch off. (see pictures below).

This project contains *IFinish* composition that will be rendered. Also you need to replace your titles into *Title Placeholder 01 ... Title Placeholder 17* compositions and drop your media into *Media Placeholders 01 .. Media Placeholders 17*.

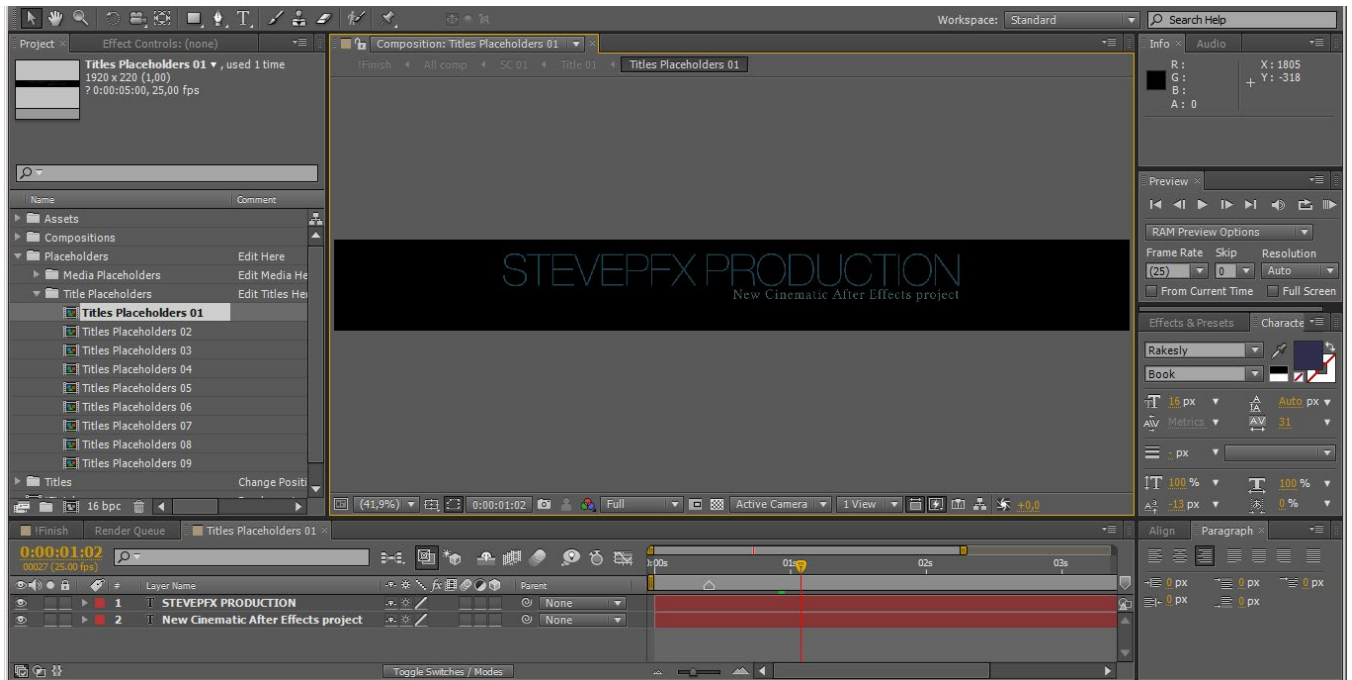

Replace images or videos

1. Go to the *Main window > Placeholders > Media Placeholders* folder. This folder contains 17 media compositions (*Media Placeholders 01.. Media Placeholders 17* compositions). Each of this composition contains an image placeholder that you need to replace. Then adjust position and size of the layer.

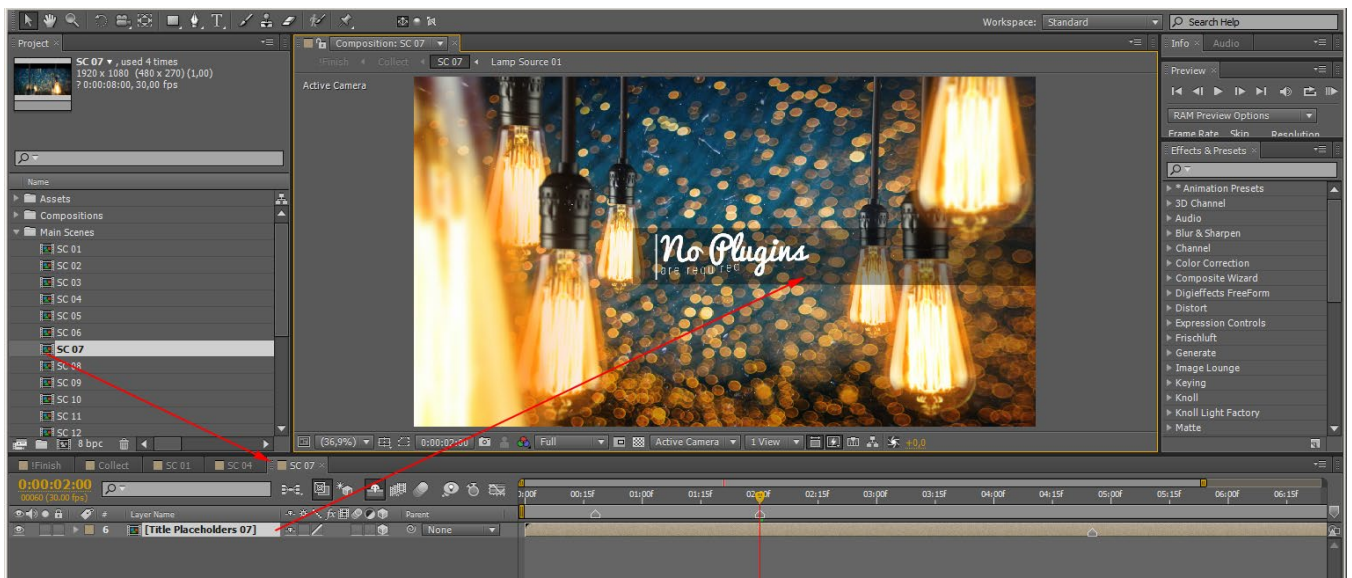

Replace titles

Go to the *Main window*> *Placeholders*> *Title Placeholders* folder. This folder contains 17 titles compositions (*Titles Placeholders 01...Titles Placeholders 17*). Each of this composition contains text layers that you can edit as simple text layers.

Adjust position of the titles

1. Go to the *Project window*> *Main Scenes*> *SC 01...SC 17* compositions. Adjust Position of the titles *Title Placeholders 01..17*.

Rendering

Finally it can be render. You need render *!Finish* composition. Select *!Finish* > Choose Composition > Add to Render Queue from the dropdown menus. You can change format you want by adjusting the settings in Render Settings and Output Module. Also you can change save location of the file that you render. When you're all done, click on render and wait while After Effects renders.
