

How to Editing Smart Object

- Open the PSD Files
- Double-click the Smart Object Layer thumbnail in the layers (editable layers are marked with a **green** label)
- A new file will be appear, and you just need to paste your design
- Save the file, and the design in the main PSD file will be update automatically
- Done and you can save it!

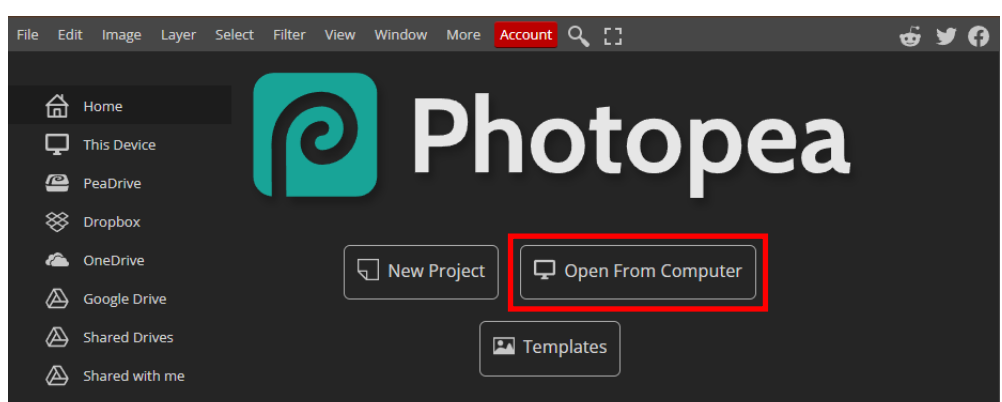

Simply double-click the Smart Object Layers, paste your design, and save.

Double click to change the background and material color (if needed).

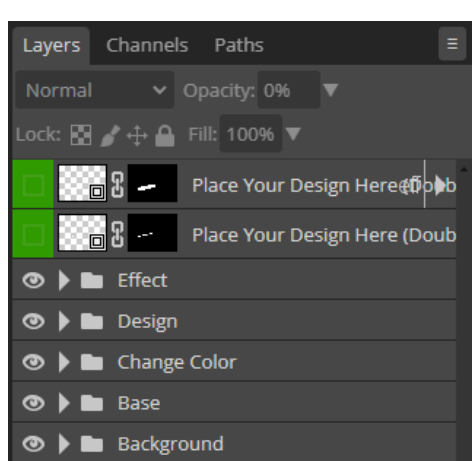

How to Edit in Photopea

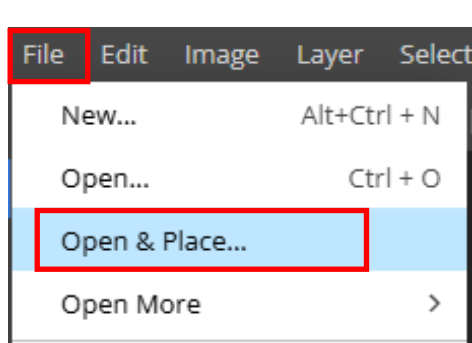

1. Go to photopea.com, then click "Open from the Computer" and select the mockup file.

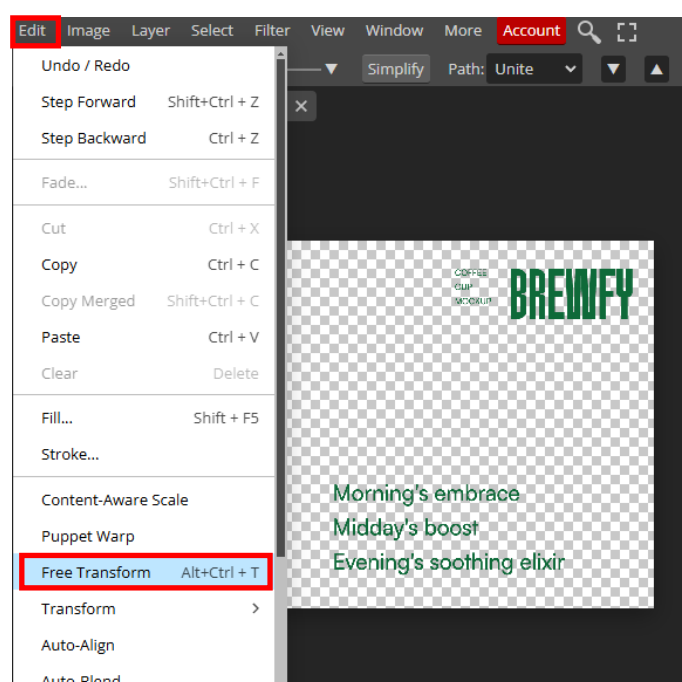

2. The mockup file will open. Then double click on the smart object screen and a new window will open.

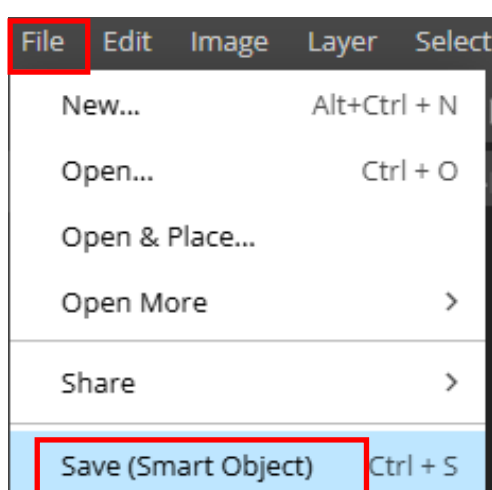

3. Select "File>Open and Place" to open the design you want to place.

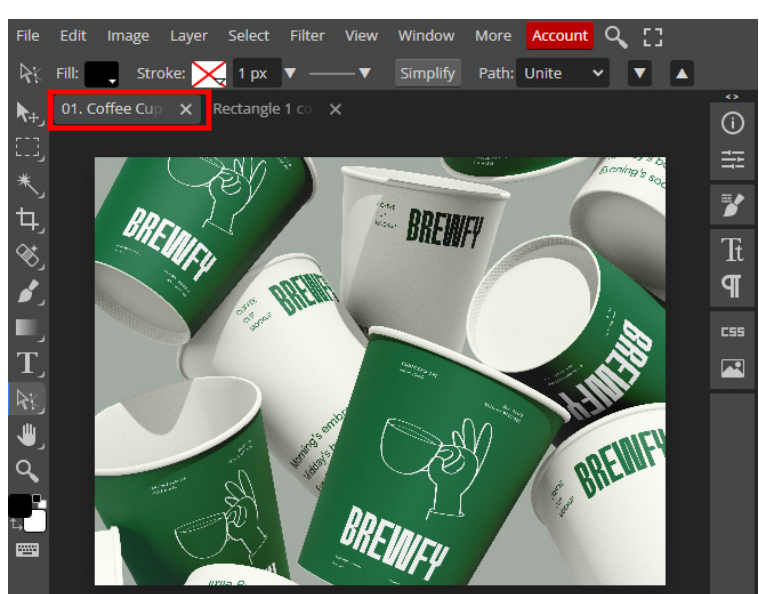

Select "Edit>Free Transform" to readjust your design.

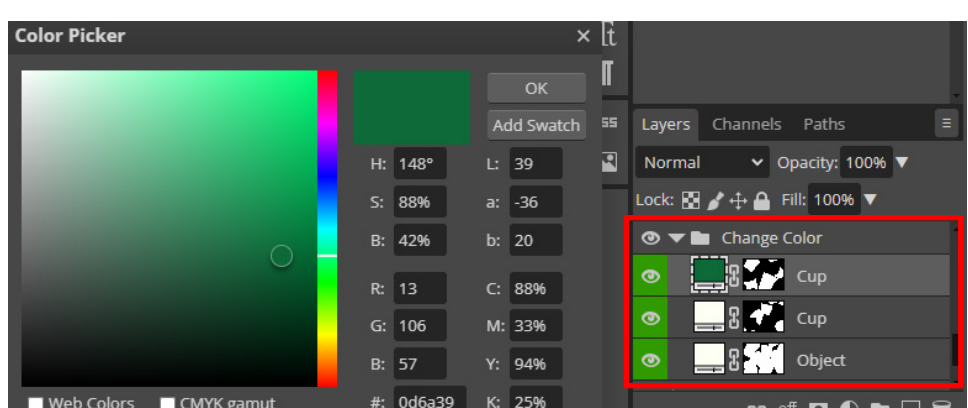

3. Select "File>Save (Smart Object)" to save and update the smart object.

4. Back to mockup files window and your mockup design is done

5. You can also change the color of the mockup by double clicking on the "change color" layer.

6. Finally select "File>Export As" and select the image format you want to save.
